

Shiftboard /SchedulePro

A Mobile SaaS app customized for
Schedule Management

Overview

Staying compliant and accurate with employee time tracking is more important than ever in streamlining the workflow and efficiency of an organization. A scheduling system that is accessible to everyone in your company is an effective tool which serves as a communication platform where managers and employees stay up to date with requests and changes in real-time.

Every organization has unique requirements. So, while deciding on a schedule management software, it will be wise to pick a solution that caters to the basic requirements while offering the flexibility to customize leave requests.

Our Client

Being a frontline workforce scheduling software company backed by innovative technology and an award-winning team, Shiftboard has provided tailor-made support for thousands of customers, including Fortune 500 companies.

Objective

To design and develop a Mobile SaaS app for estimating and managing employee time schedules.

Business Requirements

- Design and develop a SaaS mobile application with employee time & schedule management features
- Customize a calendar with intuitive UI
- Leave application tracking feature

Challenges

- To build the app in a short period of time
- Complexity of using non-native components for UI development
- Complex logic & Customized UI for iOS

Features of Mobile App

Schedule Management

The schedule management feature reduces conflicts in managing shifts, especially with complex shift patterns for a large workforce. With more discernability to the roadmap and workflow, this makes it easier to schedule work.

Notifications

We customized a notifications list feature where leave requests, cancellation requests, shift details are displayed as messages. The UI also focuses on differentiating read from unread messages using different color codes.

Leave Management

The application also features a Leave Feedback system which automates the leave request process, making it hassle-free for both management and employees. This gives more visibility into leave trends, employee availability, and even workflow.

Technologies Used

The Expected Outcome

- Increased time efficiency & productive hours by 80%
- 70% faster time-to-market
- Automated and faster schedule management and leave requests
- Better user interaction with customized calendars with intuitive UIs
