

Enterprise Application Development

Drive efficiency and business growth by leveraging our proven expertise in custom enterprise software development, API integration, modernising legacy systems, and optimizations.

Custom Enterprise Software Development

Modern business environment demands applications with scalable software that improves key facets of your enterprise. Get access to our industry-specific knowledge to design, build, and scale your new enterprise software solution.

Quality Assurance

Agile development process with regular feedback loops ensure implementation success and performance.

UI/UX, Frontend

- Automation Test framework Design
- Test Regression Suites
- Component Rich Visual Dashboards with Embedded Analytics
- Assisted Insights & Data Analytics

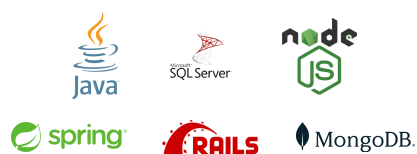

Tech Stack

Backend and 3rd Party Integration

- API Creation & Integration
- Database Architecture & Design
- 3rd Party Software Integration & Customization
- Backend Logic & System Design

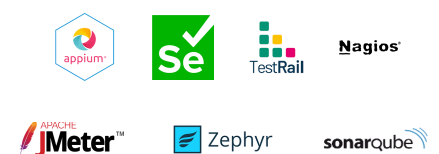

Tech Stack

Quality Assurance & Security

- High Fidelity, UI/UX Prototypes
- Framework Enhancement & Upgrade
- Enterprise Grade Data Visualization
- Data Intensive GRID implementation

Tech Stack

Celestial Systems

 is a Full-Stack Cloud Engineering company supporting Fortune 100 , Mid-Size , Startups across the Digital Transformation Value Chain delivering Modern Applications and Infrastructure

Legacy Application Modernization

Outdated software comes with much bigger risks and can be expensive to maintain.. Optimize costs, reduce time-to-market, and improve user experience through :

- Tech Framework upgrades
- Digital Transformation – Legacy to Modern
- Updated Microservices Architecture

Business Application Optimization

Streamline Application Lifecycle Management (ALM) and adhere to cost, security, and compliance guidelines.

- Performance degradation/issues
- Security - DevSecOps
- Cost Optimization

Key Deliverables

- Daily/weekly/monthly insights with measurable metrics and progress reports.
- Customized recommendations and consultations designed around your business goals.
- End-to-end services comprising planning, implementation, & deployment.
- Legacy modernization suggestions and a cloud-compliant migration.
- Full test coverage of your enterprise-grade applications.
